

Amendments to the Specification:

The paragraph starting at page 12, line 20, is amended and now reads as follows:

-- The baffle wall 15 extends with its forward edge 28 upstream of the take-out opening 3. The take-out opening 3 lies in the region of the transition from the horizontal guide surface 16 to the vertically-extending baffle wall 15. The take-out opening 3 is partitioned into a vertical window 17 as well as into a horizontal window 18. The vertical window 17 extends in the axial direction and in the peripheral direction and the horizontal window 18 lies in the plane of the guide surface 16. The take-out opening 3 is limited with respect to the vertical window 17 by the curved baffle wall 15 on the inner side and, with reference to the horizontal ~~wall~~ window 18, downwardly by a base plate dropping off at an incline and rearwardly in the form of a curved ramp. --
